

Editing Vector Mask

Click on “Add Vector Mask” Button located on the bottom of the Layers palette. This will create a black mask around your photo, like a photo knockout.

This step needs to be completed.

1. Make sure the Vector Mask is selected—it will have square brackets around the corners.

2. At this point, you can use your brush or eraser to alter the image.

By switching the colors back and forth from white to black, you will either add to the image or take away from it.
